

## ETL Developer

Exciting full -time, 6 month **ETL Developer** opportunity with an Eastside e-commerce company.

The ETL Developer will work with the data teams to populate multi-petabyte data repositories that enable the next generation of Self Service Analytics. The ideal candidate will have knowledge and experience creating and managing data in traditional and nontraditional ways to unlock the value and potential of the data. Previous experience in environments with big data platforms like Teradata, Hadoop and Spark is highly desirable. Experience designing, coding, testing, documenting and implementing the data extraction, transformation, and loading of source data into innovative enterprise and clinical data warehouse solutions that support the business intelligence and decision support systems needs is required.

Must be able to analyze and digest what the business has accomplished to date and wants to continue to do with its data, and design and/or manage the best possible ETL process around those goals. We are looking for a quick learner that has the ability to assess the current state of the effort and quickly integrate with an existing team.

### Job Requirements/Experience

- Onboard to an existing effort quickly and efficiently
- Share engineering support, release, and on-call responsibilities.
- Utilize ETL best practices and implement them for process improvement.
- Work with product managers, architects and data scientists to translate conceptual requirements into technical implementation requirements
- Experience defining, designing, implementing and testing data integration modules
- Ability to estimate engineering effort; plan implementation/revisions, and roll-out system changes
- Experience designing, coding, and testing major features
- Experience with agile and waterfall project development methodologies.
- Exposure and experience working in big data environments managing terabytes of data and information.
- .Highly self-motivated for success in a fast-paced, dynamic environment.
- Strong communication and organizational skills.

Excellent work environment and technology. If this sounds like an exciting opportunity to you, submit your resume to [jobs@allthings-hr.com](mailto:jobs@allthings-hr.com).
